THE CONSOLE

MEET THE 245

The Auracue 245 is a full-size lighting console that puts every fixture, palette and playback within arm's reach. Two multi-touch screens, banks of backlit faders, and four tactile encoders — engineered so a programmer can build a show fast and a board op can run it flawlessly under pressure.

WHY CREWS CHOOSE IT

EVERYTHING UNDER YOUR HANDS

01

Dual multi-touch displays

Two high-resolution screens keep fixtures, palettes, layout view and playbacks one tap away — no menu-diving mid-show.

02

12 DMX512 universes

Twelve hardware DMX outputs drive more than 6,000 channels — patch the biggest rigs straight from the back panel.

03

Backlit faders & keys

Banks of RGB-backlit playback faders and command keys you can read and run confidently in a full blackout.

04

POWERFUL FX ENGINES

Build them yourself or let the console do it for you with over 200 prebuilt effects always ready even when you're not.

05

Timecode ready

LTC and MIDI in/out lock your cues to picture, music or the rest of the production rig.

06

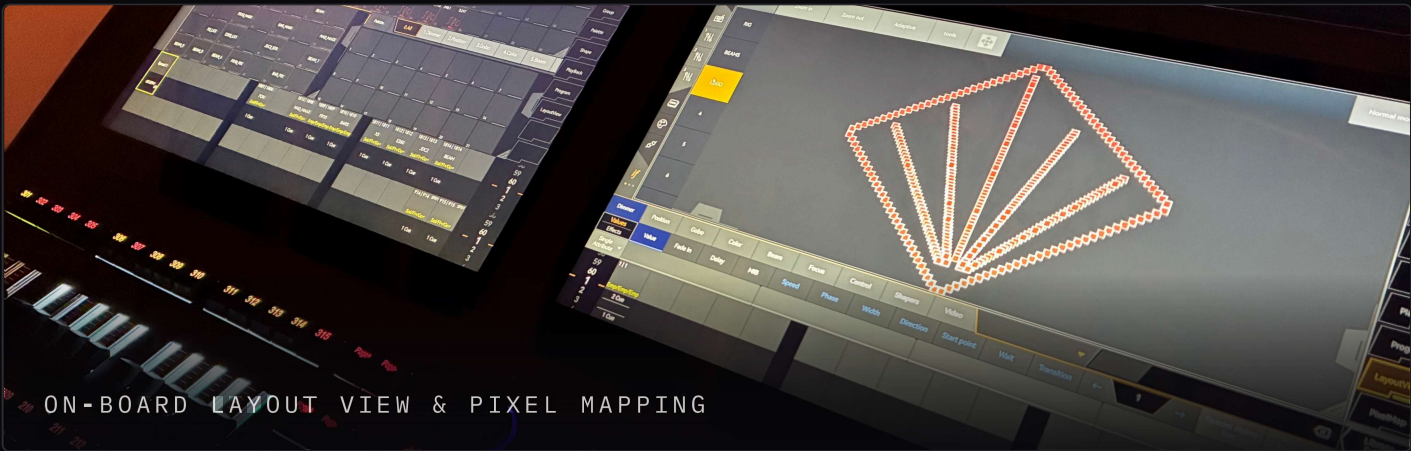

Layout & pixel mapping

On-board layout view and pixel mapping are built right into the console — design looks without leaving the desk.

TALKS TO YOUR ENTIRE RIG

Show management, programming and patch live on the console itself — and a full back panel of professional connectors ties it into everything else on site.

ON-BOARD LAYOUT VIEW & PIXEL MAPPING

BACK-PANEL CONNECTIVITY

DMX512 OUT	x8 5pin - x4 3pin	LTC TIMECODE	IN / OUT
